Computer Science Department

Multimedia Applications and Virtual Reality

Master – Artificial Intelligence and Application

Continuous assessment – 15 min

Full Name : . . . . . .

Birthday : . . . . . .

Answer directly on the sheet (Check the box(es) of the correct answer(s))

1	The nature of contradiction interference is	*A perception of the real world*	☐
		A perception of the virtual world	☐
		A partial perception of the real world	☐
		A partial perception of the virtual world	☐
2	The resolution of geometric objects is	*Infinite by definition*	☐
		Finite by definition	☐
		Finite except for vertex-based structures	☐
		Finished except for edge-based structures	☐
3	Access to space in nonparametric analytical structures is	*Direct*	☐
		Parametrized	☐
		Constant	☐
		Linear	☐
4	When visual perception is not exclusive to the virtual world	*It's a total immersion*	☐
		This is partial immersion or augmented reality	☐
		This is contradiction interference reduced to zero	☐
		This is a total lack of immersion	☐
5	Active glasses separation is a separation	*At screen level*	☐
		Requiring single-color filters	☐
		Requiring display on spectacle lenses	☐
		Which uses a remotely controlled mechanical device	☐
6	Pneumatic return interfaces (micro-balloons) exploit sensitivity	*To the temperature*	☐
		To the pressure	☐
		To the physical contact	☐
		To the vibrations	☐
7	The choice of sound device types depends on	*The degree of freedom and the level of immersion desired*	☐
		The diffused sound quality	☐
		The amplitude of sounds in virtual scenes	☐
		None of the previous three answers	☐
8	VR standards	*Are standardized and are general*	☐
		Depend on manufacturers and large firms	☐
		Do not exist	☐
		Are normalized for each dimension	☐
9	Deformable solids are used to describe entities whose tolerated transformations are	*Translations and rotations*	☐
		Translations and scaling	☐
		One-sphere homeomorphs	☐
		Homeomorphs to the initial solid	☐
10	An adjacency graph (Incidence and neighborhood) in a VW can serve as a	*Kinematic model*	☐
		Analytical geometric model	☐
		Semantic model	☐
		Topological model	☐
